MCPC HRG

Good afternoon Stakeholders,

The Perkiomen Mapping and Flood Mitigation Study is underway! It was initiated to identify locations where flooding poses the most danger to humans and our communities and what can be done to mitigate flooding from severe storms. Representative Joe Webster was able to secure state funding for a comprehensive flood analysis of the entire 362 square mile Perkiomen Creek watershed. The outcomes of the analysis will help guide municipalities, counties, and individual property owners as we all work to slow and reduce stormwater runoff and infiltrate more rainwater into our precious underground water supplies.

Your feedback regarding flooding issues in your communities is an important part of the Study. You may respond to the online survey [here](#). Your response by October 7th, 2024 will be greatly appreciated.
